

Mayline TechWorks™ Applications

When one of the nation's top-ranked general contractors decided to remodel the information technology department at its Appleton, Wis., headquarters, they turned to the Mayline Co. to find the perfect technology workstation.

The main goal of the project was to find a workstation that could organize the work areas of their microcomputer specialists and their equipment. Mike Peterson, Manager of Microcomputer Services for Oscar J. Boldt Construction, had several requirements for this project for which Mayline was able to provide a solution.

"Our ability to reconfigure the room is of great importance to us," said Peterson. "When we completed the installation, we had a room that was not only organized, but one that our technicians were happy to come to work in."

Mayline's TechWorks™ technical workstations addressed all of their specific needs. The work benches offered the required heavy-duty capabilities with more than adequate weight-bearing ability and electro-static dissipate work surfaces.

"The adjustability of the TechWorks benches and the free-standing design made TechWorks much more attractive than a 'cubicle' design that would be supported or bolted to the wall," said Peterson.

Cable management was also critical as the workstations needed to support multiple electrical and data cables. The integrated vertical and horizontal cable management capabilities of the TechWorks system efficiently addressed this concern. In addition to its intelligent design, TechWorks also was priced at a point that kept this project under budget.
