

Kwik-File Mailflow® Systems Application

The manager of print, mail and distribution services stated, "we have been a long time user and have a successful track record with Kwik-File products, which played an important role in our selection process".

A nationally known financial institution recently established a new Midwest Region operations center in Shoreview, Minnesota, a northern suburb of Minneapolis. The heart of this facility is its distribution center for mail. Customer personnel worked closely with our dealer, Office Controls, and our local representative, Jim Lynn, in designing their mail distribution center.

The distribution center uses a presort system dubbed "power sort" that breaks mail into groups before final sorting begins. Ultimately, it allows the center the ability to handle the mail as few times as possible before sending it on its way.

Kwik-File's Mailflow Systems furniture was chosen over its competitors due to its extreme durability and adjustability, as well as for the company's ability to customize the products adapting to special customer requirements.

The distribution center also breaks down incoming mail from all regions, sorts it and provides logistic support in its redistribution. The manager stated, "because of the extreme heavy usage of this furniture, I worked with Kwik-File on selecting a special material for our tops called Kydex. Kwik-File's flexibility in providing this custom work surface combined with its standard heavy-duty steel construction will allow our distribution center to function efficiently and look good for years to come."
