

"BLADE ONLY" STRAIGHTEDGE ATTACHMENT

This straightedge is designed for use with the underboard type attachment such as Mayline 7302A-B-C.

Loosen the screws on each end of the straightedge, a maximum of one turn. This will permit the bars to slide in or out and properly line up with the blade clamps of the underboard attachment. Then retighten screws.

CAUTION:

Tapered bushings on underside of straightedge serve as nuts. Do not lose these when loosening screws.

SPECIAL NOTE:

The E-Z Grip and Mobile Straightedges - blade only, can be converted to the above-board parallel ruling action by ordering 7301A-B-C attachment.
