

Installation Instructions

TCNR Corner Platform

TCNR: 30" x 30" Corner Platform. To be installed only in a corner between two adjacent tables; intended to support 24" wide sorter. Requires 32" x 32" footprint: supported by brackets to adjoining table and by one leg in rear corner.

Tools required: Screwdriver or Power Screwdriver, 1/4" Socket Wrench

TO INSTALL THE CORNER PLATFORM:

1. Remove packaging material (from top, two steel brackets, two flat steel plates, corner leg bracket, leg and hardware)

NOTE:

Check for concealed damage. Report any damage to carrier.

2. Take one angle bracket and place the side of the bracket with small holes flush against the end panel of the adjacent table which will be attached to the corner platform. Center the angle bracket on the end panel and directly under the adjacent table top to ensure that the table top and the platform top will be level once installed. Drill holes in the end panel using the angle bracket as a template. Repeat the same procedure with the other adjacent table drilling on the appropriate table end as shown.

3. Assemble one angle bracket to one of the adjacent tables. Place one flat plate on the inside of the cabinet and one angle bracket on the outside of the cabinet. Align the holes and fasten in place using bolts through the drilled holes. Secure with hex nuts against flat plate.

Do the same to the other table.

4. Take the Corner Platform top and turn it upside down. Install the leg bracket in the corner "opposite" the flat (chamfered) corner of the top. Place the leg bracket with the reinforcing plate facing the outside of the table.

5. Install the single leg into the leg socket using allen wrench to secure the two bolts. Note that the leg position in the socket is adjustable in 1" increments. Make sure the leg is installed so that the corner platform will be the same height as the adjacent tables. The Corner Platform is leveled using the adjustable glide.

6. Move the first adjacent table into what will be the final position and put the Corner Platform in place. Secure the Platform top to the adjacent table angle bracket using screws.

9. The last step is the most difficult. Slide the other adjacent table into place. Reaching through the opening between the two adjacent tables. Put screws through the angle bracket and tighten to the underside of the Corner Platform top. A minimum of two screws must be connected.

10. Install the filler panel (optional). Magnetic tape has been placed on both sides of the filler panel. Position the filler panel vertically and move it into place, holding it firmly. Magnetic attraction will pull and secure the filler panel into position.
