1. Tools required: Phillips screwdriver. Unpack carton; then identify and count all parts.

2. Place a 2" thick shelf with open side down on the floor; front edge has slots at each end. Install lower outside end panels (1/16" thinner than upper outside end panels): insert tab through slot in front as shown, and turn back of end panel until it fits behind back of shelf. Repeat with other side. Insert 4 screws through outside end panel and shelf at rear corners; fasten securely.

3. Install top 2" thick shelf by sliding onto tabs of outside end panels. Pull out the back edges of the outside end panels so the shelf can be lowered into place; then return outside end panels to their original position.

4. Assemble upper level by installing upper outside end panel. Insert tab at bottom front of panel into same shelf slot used by lower outer end panel; then move back of upper end panel until it fits behind back of shelf. Now insert two screws; repeat with opposite panel. Install top shelf as before; insert 4 screws (through spacers for added depth and better fit); fasten securely.

5. Now that both lower and upper levels have been combined into one large organizer, carefully place the unit on its back. Insert both lower and upper fiberboard back panels; then insert both upper and lower inside header panels.

6. Install corrugated inside end panels with feet on bottom and large corner cutout to top rear of sorter; (press inside end panels firmly against outside end panels in both upper and lower levels).

7. Install one corrugated shelf into the slots in the inside end panels, with the short folded side of the shelf on the bottom. Repeat with the remaining shelves in both upper and lower levels, ending with the last shelf in each level resting on the bottom of that level.

8. Place a corrugated insert (with notch at the bottom front) into a corrugated divider. Fold small flaps at bottom of divider outwards. Now install corrugated divider, making sure the folded flaps fit under bottom shelf in each level, and top of divider fits into slots in header panel. Finally, press divider down firmly until flush with shelves. Repeat with remaining five dividers and inserts in upper level; then install 6 dividers and inserts in lower level.

9. Install plastic strips on front edge of each shelf, with the short edge of the plastic strip under the bottom, and the longer edge over the shelf top. Roll each strip onto the shelf edge and press firmly into place. Repeat for all shelves.

10. The grooves in the front of each plastic strip hold the paper labels provided. Separate each label along the perforations; then insert in the bottom groove, and push the label into place, tucking the top of label into the top groove with your fingernail. (Labels can be created using a PC and printer or typewriter as desired, but before separating.)
